Summary

Final-year B. Tech Computer Science student specializing in Data Science, with foundational knowledge of **Python, C, C++, Java, HTML, CSS, and SQL**, gained through coursework and personal projects. Eager to apply and strengthen these skills in **data structures, problem-solving, and database management**. Passionate about learning to turn data into meaningful insights, and seeking an entry-level role in **Data Analyst, Data Science, Business Intelligence, or Software Development** where I can grow as a developer.

Skills

- **Business Intelligent & Analytics:** Power BI, MS Excel.
- **Programming & Analytics:** Python (Pandas, NumPy, Matplotlib, Seaborn), C, C++, JavaScript, Node.js, HTML, CSS, React.
- **Data & Databases:** MySQL, MongoDB
- **Tools & Professional:** Google Sheets, GitHub, Jupyter Notebook, MS Office, documentation, presentation, teamwork.

Projects

Cloud Based Full-Stack Cakeshop Platform with AI & MongoDB | React.js, Node.js, MongoDB, Express.js, OpenAI |

- Developed a responsive, production-ready e-commerce web application for a bakery using cloud architecture and a NoSQL database. The platform features an intelligent AI integration that enhances the user experience by offering semantic product searches and automated customer assistance, alongside secure cloud-hosted order management.
- **Full-Stack Architecture:** Built a dynamic front-end client seamlessly connected to a scalable RESTful backend API layer.
- **Cloud Database:** Utilized MongoDB Atlas for flexible, real-time data storage of user profiles, dynamic cake catalogs, and orders.
- **AI Integration:** Implemented an AI assistant to power smart product recommendations and conversational customer support.
- **Cloud Deployment:** Hosted and deployed the application infrastructure across secure cloud platforms for high availability

Smart Waste Management System using IoT and AI Predictions | Python, scikit-learn, MongoDB, React.js, Arduino IDE | (Ongoing)

- Design an IoT-based sensor network using ultrasonic sensors to monitor real-time waste levels in garbage bins.
- Develop a cloud-connected backend that collects, stores, and processes sensor data from multiple bins.
- Build a machine learning model that predicts bin-fill trends and forecasts when each bin will become full.
- Automatically alert municipal authorities when bins approach full capacity and generate optimized collection routes for waste trucks.

Industrial Training & Internship

Euphoria GenX, Cloud Based Full Stack Development using PHP & My SQL with AI integration, 8-12weeks, unpaid, non-credit based. (Feb-May) 2026

Ardent Computech Pvt Ltd, Generative AI and Large Language Models, 4-8 weeks, unpaid, credit based. (July-Sept)2026

Education

Brainware University B. Tech in Computer Science and Engineering – Data Science CGPA: 8.69/10	2023 – 2027
Vivekananda Vidyapith H.S School Secondary Education (TBSE) Percentage: 95.6	2021
Vivekananda Vidyapith H.S School Higher Secondary Education (TBSE) Percentage: 67.6	2023

Domain of Interest

Full-Stack Web Development, Data Analytics and Predictive Modeling, IoT Ecosystems and Smart Applications

Courses & Certificates

Cloud Based Full Stack Development using PHP & My SQL with AI integration (Euphoria GenX) | Generative AI and Large Language Models (Ardent Computech Pvt Ltd) |

Languages

English - Professional Proficiency | Hindi - Native Proficiency | Bengali - Conversational Proficiency

Signature
